Definitions of the trading locations for which Platts publishes indexes or assessments

The following specifications guide contains the primary specifications and methodologies for S&P Global Commodity Insights' Platts chemical assessments throughout Europe and Africa. All the assessments listed here employ Platts Assessments Methodology, as published at Platts-Assessments-Methodology-Guide.pdf

These guides are designed to give Platts subscribers as much information as possible about a wide range of methodology and specification questions.

This guide is current at the time of publication. Platts may issue further updates and enhancements to this guide and will announce these to subscribers through its usual publications of record. Such updates will be included in the next version of this guide. Platts editorial staff and managers are available to provide guidance when assessment issues require clarification.

Assessments are published in accordance with the Holiday Publication Schedule | S&P Global. Daily assessments are published on weekdays and are normally suspended in line with the public holidays in the UK. Weekly assessments are published on the specified days of the week, and are normally brought forward to the preceding working day, in case of a holiday. All spot assessments reflect values at 16:30 London time.

The Market-on-Close assessment process for MTBE, ETBE, benzene, toluene and mixed xylenes is facilitated through the eWindow communication tool. For further details, please consult the Chemicals timing and increment guidelines at chemicals-timing.pdf

Olefins and Derivatives

Roll: Delivery and loading months roll to the next month on the first working day of the month.

Duties: T2 product (duty paid for European-qualified material).

Ethylene (C2)

Specification: Minimum purity of 99.9%.

Location Basis: CIF Med reflects deliveries in the Western Mediterranean ports, including those on the West Coast of Italy and southern France.

Propylene (C3)

Specification:

- **Polymer grade:** minimum purity of 99.5%.
- **Chemical grade:** minimum purity of 94%.

Butadiene (C4)

Specification: Minimum purity of 99.5%.

Crude C4s

Specification: Typical butadiene content of 43%, typical isobutylene content of 25%.

Crude C4 factor: Ratio between the crude C4 assessment and the same-day CIF NWE physical naphtha assessment [PAAAL00].

Raffinate-1

Specification: Minimum isobutene content of 35%.

Raffinate-1 factor: Ratio between the raffinate-1 assessment and the same-day CIF NWE physical naphtha assessment [PAAAL00].

Oxides

Specification:

- **Ethylene Oxide (EO):** Minimum purity is 99.9% by weight, maximum water content of 70ppm and maximum aldehydes of 40ppm.
- **Propylene Oxide (PO):** Minimum purity of 99.9%, maximum water content of 100ppm, and maximum aldehyde content of 100ppm.

Ethylene Glycols (EG)

Specification:

- **Monoethylene Glycol (MEG):** Minimum purity of 99.9%.
- **Diethylene Glycol (DEG):** Minimum purity of 99.5%.
- **Triethylene Glycol (TEG):** Open specification material; minimum purity of 99.5% purity and a typical density of 1.122-1.127 g/cm3 or g/ml.

Propylene Glycols (PG)

Specification:

- **Monopropylene glycol industrial grade (MPGi):** Minimum purity of 99.5%.
- **Monopropylene glycol pharmaceutical grade:** Minimum purity of 99.7%.
- **Dipropylene glycol fragrance grade:** Minimum purity of 99.7%.

Ethanolamines (EA)

Specification:

- **Monoethanolamine (MEA):** Minimum purity of 99%, colorless appearance.
- **Diethanolamine (DEA):** Minimum purity of 99%, colorless appearance.
- **Triethanolamine (TEA):** Minimum purity of 99%, colorless appearance.

Contract Prices for Olefins and Derivatives

Ethylene, propylene, butadiene and MEG CPs: Reflect industry-settled European gross prices for long-term contract deliveries, before discounts. The CPs are databased on the first of the month, once the confirmation of a full settlement is received. Platts considers the contract price fully settled when it has information that at least two independent buyers and at least two independent sellers have agreed the same price. In the event that there is more than one price settlement, Platts generally publishes an average of these price settlements, as per industry convention. If a full settlement is not reached, Platts will not publish a monthly contract price.

Platts Contract Price Indicators

Ethylene and Propylene: Reflect a calculated gross contract price for the month ahead. Platts uses a rolling regression model to calculate an indicative contract price throughout the month pending confirmed settlements. If the industry contract price settles before the end of the month, the month-ahead calculation is replaced with the industry-settled contract price. The month rolls on the first of each month.

The independent variables used in the rolling regression model are the differences between the latest 10-day average on

© 2026 by S&P Global Inc. All rights reserved.

the day of calculation and the 10-day average at the time of the most recent industry contract price settlement for four published daily prices. The independent variables are:

- Platts month-ahead ethylene FD NWE spot price;
- Platts month-ahead propylene FD NWE spot price;
- Platts naphtha CIF NWE financial M1 swap price [PAAAJ00];
- Platts benzene CIF ARA M2 spot price.

Platts Petrochemical Cash Cracker Margin

Platts Petrochemicals Cracker Margin (PCM) spot and contract calculations aim to provide a basic calculation of the petrochemicals margins of steam cracker operators in Europe.

The variables used in the calculation of the spot PCM include:

- Naphtha CIF NWE [PAAAL00];
- Ethylene FD NWE (3-30 days forward, converted to $/mt);
- Propylene FD NWE (3-30 days forward, converted to $/mt);
- Butadiene FD NWE (3-30 days forward, converted to $/mt);
- Benzene CIF ARA (5-30 days forward);
- Gasoline 10 ppm FOB AR [PGABM00];
- Low-sulfur fuel oil 1% CIF NWE [PUAAL00].
- Euro-dollar exchange rate [BCADD00]

The PCM spot formula is as follows:

- PCM = 0.96*Ethylene FD NWE + 0.54*Propylene FD NWE + 0.19*Benzene CIF ARA + 0.17*Butadiene FD NWE +0.55*Gasoline 10 ppm FOB Rdam barge + (-0.0935*LSFO 1% CIF NWE) + (-3.13*Naphtha CIF NWE cargo).

The variables used in the calculation of the contract PCM include ethylene, propylene, benzene, and butadiene industry-settled monthly contract prices and cumulative monthly averages of the respective feedstocks.

Aromatics and Derivatives

Roll: Delivery and loading months roll forward to the next month five London working days prior to the first working day of the next month.

- MX and toluene spreads to gasoline are measured against the Eurobob FOB AR gasoline swaps:
- The M1 spread factors in the balance-of-month gasoline swap (ABWFB00) up to and including the 20th of each month. From the 21st of each month, until the roll, it reflects the front-month Eurobob FOB AR barge gasoline swap (ABWFC00) and a time spread. After the roll, it is measured against the front-month (ABWFC00).
- The M2 spread factors in the front-month gasoline swap (ABWFC00). After the roll, it is measured against the second month gasoline swap (ABWFD00).

Duties: T2 product (duty paid for European-qualified material).

Laycan: Please consult the table.

- Platts publishes bids/offers/intentions to trade benzene, toluene, MX and PX for loading/delivery during the balance of the month (M1) and full calendar month (M2). Platts also publishes months three, four, and five for benzene.
- For benzene and PX only Platts also publishes bids, offers and intentions to trade for half-month laycans.
- Orders with loading/delivery dates stretching over more than one month are not considered due to their restrictive nature.

Volume: Please consult the table. The specific quantity should be stated in the bid/offer.

Nomination: For CIF markets, sellers are expected to narrow the delivery window post-trade, subject to mutual agreement with the buyer. At least five calendar days prior to the narrowed delivery window, sellers will nominate performing vessel and narrow the window to ten days for coasters or larger vessels, and to five days for barges. For balance month trades with reduced laycans, nominations will be made promptly following the trade.

Vessel terms: Laytime and demurrage for MX and toluene are capped at the level of a 10,000 dwt vessel. Counterparties agree to demurrage either as per charterparty agreement or at the market rate of a 10,000 dwt vessel, whichever is lowest.

Benzene

Specification: ASTM D-2359 latest edition.

Toluene

Specification: TDI grade. ASTM D-5606: Clear liquid free of sediment and haze when observed at 18.3 to 25.6°C (65 to 78°F). Minimum purity of 99.9% by weight; maximum benzene content of 300 mg/kg; maximum non-aromatics content of 0.1% by weight; maximum ethylbenzene content of 300 mg/kg; maximum xylenes content of 500 mg/kg; maximum acid wash color – pass with 2; maximum color Pt-Co scale – 10.

Mixed Xylenes (MX)

Specification: Clear liquid free of sediment. ASTM D-843. One or more isomers removed. No limits on metaxylene, paraxylene and orthoxylene content. Maximum non-aromatics content of 3%; maximum ethylbenzene content of 20% by volume; maximum distillation range of 5 Celsius; minimum initial distillation temperature of 137 Celsius; maximum dry point of 143 Celsius; maximum acid wash color – pass with 6; maximum copper corrosion – pass (1A or 1B); maximum color Pt-Co scale – 20.

Paraxylene (PX)

Specification: Minimum purity of 99.7%.

Orthoxylene (OX)

Specification: Minimum purity of 98%, maximum non-aromatics content of 0.3%.

Ethylbenzene (EB)

Specification: ASTM D-3193 latest edition.

Styrene (SM)

Specification: ASTM D-2827, minimum purity of 99.7% latest edition.

Caprolactam (CPL)

Specification: Molten state, Iron content of less than 0.5mg/kg.

Cyclohexane (CX)

Specification: Minimum purity of 99.9%; typical density of 0.78-0.80 g/ml, sulphur content below 0.1%.

Adipic acid

Specification: White crystalline solid; purity of 99.7%; maximum iron content of 0.5ppm.

Contract Prices for Aromatics

Benzene and OX CPs: Reflect industry-settled prices for long-term contract deliveries. The monthly contract prices are updated at the start of the settlement month, once Platts

© 2026 by S&P Global Inc. All rights reserved.

has obtained information that at least two independent buyers and at least two independent sellers have agreed the same price.

- For benzene, if a full settlement is not reached, Platts will not publish a monthly contract price. In the event that there is more than one price settlement, Platts generally publishes an average of these price settlements, as per industry convention. In addition to the Euro-denominated price, Platts also publishes a $/mt contract price for benzene, which is based on the European Central Bank euro daily reference rate of the day prior to the date of settlement to convert to dollars, as agreed between contract counterparties.

- For OX, if there is no full settlement, Platts will publish the range of all settlements representing the lowest settlement and the highest settlement heard from market participants, with an average of these price settlements, as per industry convention. In the event that only one settlement is reported in the market, and corroborated by a sufficient number of market participants, this settlement may be taken as the low, high and average.

Platts Contract Price Indicator

Benzene: Reflects calculated net contract prices for the month ahead. Platts uses a simple rolling five-day average of the assessment for benzene delivered in the month ahead to calculate an indicative front month contract price. Specifically, Platts uses the M2 CIF ARA benzene price [AAOQR00] in its calculations with the exception of the last five London working days of the month when the contract price indicator is calculated on the basis of M1 CIF ARA benzene [AAOQQ00]. This reflects the time at which the M1 assessment rolls from the existing month to the following month.

Methanol and Ethers

Duties: T2 product (duty paid for European-qualified material).

Methanol

Specification: International Methanol Producers and Consumers Association (IMPCA) Reference Specification; minimum purity of 99.85%, maximum water content of 0.1% by weight and maximum ethanol content of 50 mg/kg.

Sustainability: Low-carbon MMF reflects a maximum carbon intensity of 32.9gCO2e/MJ, certified by ISCC EU or another recognized industry body.

Roll: Loading months roll to the next month five London working days prior to the first working day of the next month.

- **Methanol bunker fuel:** Value of spot methanol delivered from the terminal to a receiving vessel for fueling, via barge, factoring in logistics cost. Platts also expresses this value in LNG and fuel oil energy content equivalent. Platts also publishes prices of key marine fuels by calorific value. The comparisons and conversion factors can be found in Platts Global Bunker Fuels specifications guide at bunker-fuels-specifications.pdf
- **eMethanol production cost:** Factors in the cost of production, transportation and storage for renewable methanol, produced via electrolysis and direct air-captured carbon dioxide. The assessment is aligned with the assumptions of the Process Economics Program (PEP). The variable and fixed inputs are periodically reviewed to ensure they are representative of prevailing market dynamics.

MTBE

Specification: Minimum purity of 98%, maximum water content of 1,000 ppm and maximum methanol content of 1.5% of the total weight.

MTBE factor: The MTBE to gasoline factor expresses the ratio between the daily MTBE assessment basis FOB ARA and the daily Eurobob FOB AR spot assessment [AAQZV00].Laycan: 3-15 (Monday-Tuesday) or 5-15 (Wednesday through Friday) days forward window from the date of publication.

Nomination: At least 48 hours nomination period.

ETBE

Specification: Published information reflects 100% ETBE purity. The purity on loading is minimum 90% ETBE and minimum 95% ethers. Percentage price adjustments for purity post trade are based on the following formula: ETBE FOB AR flat price [AASLQ00] = MTBE FOB ARA [PHALA00] + (ETBE premium [AASLQ02] x% purity). Due to the differing ETBE purity in tanks ahead of loading, price adjustments for purity are based on the ETBE formula at the time of load, and not at the time of trade.

Sustainability: Maximum carbon intensity (CI) of 41.90 grams of CO2 equivalent per megajoule of energy, based on the prevailing fossil fuel comparator under EU Renewable Energy Directive (RED) requirements. The seller shall provide proof of sustainability documentation obtained in the framework of voluntary schemes approved by the European Commission within 30 calendar days from barge loading and the buyer holds the right to audit the sustainability documentation for the sole purpose of determining the validity and veracity of these documents.

Laycan: 3-15 (Monday-Tuesday) or 5-15 (Wednesday through Friday) days forward window from the date of publication.

Nomination: At least 48 hours nomination period.

Contract Prices for Methanol

Quarterly CP: Reflects industry-settled gross prices for long-term contract deliveries during the current quarter, before discounts. The quarterly contract price is updated at the start of the settlement quarter, once Platts has obtained information that at least two independent buyers and at least two independent sellers have agreed the same price. In the event that there is more than one price settlement, Platts generally publishes an average of these price settlements, as per industry convention. If a full settlement is not reached, Platts will not publish a quarterly contract price.

Monthly Net CP: Reflects net prices for long-term contract deliveries during the current month. The monthly contract price is published on the 1st of each month, and reflects the average of Platts' daily month-ahead FOB Rotterdam spot assessments, published during the preceding month (MEFRA01, MEFRA02).

Polymers

Locations:

- **CFR Turkey:** Istanbul.
- **CFR North Africa:** Morocco, Algeria, Tunisia and Egypt main ports.
- **CFR West Africa:** Nigeria, Ivory Coast, Ghana, Benin and Togo, normalized to Lagos.

For most assessments, NWE reflects Belgium, France, Germany, Luxembourg and the Netherlands. For PBR, NWE includes Germany, Benelux region, France, and Switzerland.

Payment terms:

- **CFR North Africa:** 60 days net payment terms.
- **CFR West Africa:** 60 days net payment terms.

Duties: CFR assessments exclude import duties.

Packaging: Product sold in plain or unmarked bags is not included in the assessment unless the market considers such business to be representative.

Origin: Product of both domestic production and imported prime material.

Polyethylene (PE)

Specification: Please consult the table.

Ethylene Vinyl-Acetate (EVA)

Specification:

- L-EVA - Below 10% vinyl-acetate content.
- M-EVA - Between 10-25% vinyl-acetate content.
- H-EVA - Above 25% vinyl-acetate content.

© 2026 by S&P Global Inc. All rights reserved.

Polypropylene (PP)

Specification: Please consult the table. MFR is tested per 10 minutes @230°C.

Polystyrene (PS)

Specification: The EPS assessments are for product used in insulation with flame retardant properties. The GPPS and HIPS assessments reflect food-grade material.

Acrylonitrile Butadiene Styrene (ABS)

Specification:

- **General purpose/natural:** injection grade.
- **Average color and auto black grades:** Platts acknowledges the variance in price of colored versus auto black resins depending on the color of the resin. The assessments for colored/auto black resins are based on Platts best estimate, taking into account the premium over natural grade resin as reported by market participants.

Polyvinyl Chloride (PVC)

Specification: Pipe-grade suspension PVC with a K-value of 66-68.

Polyethylene Terephthalate (PET)

Specification: Intrinsic viscosity of 0.7-0.86 and is B* neutral.

Nylon (PA, polyamide)

Specification:

- **Nylon 6:** viscosity of 2.7g/ml; bright with no additives (prime/virgin grade)
- **Nylon 66:** Engineering grade resin, viscosity level of 2.7g/ml

Acrylic Fibers

Specification: Staple fiber; minimum 85% acrylonitrile, Denier 3.

Polymethyl methacrylate (PMMA)

Specification: Clear pellet; vicat softening point at 95-108°C tested at B/50. MFI tested per 10 minutes @230°C/3.8 kg.

Polycarbonate (PC)

Specification: Clear pellets. MFI tested per 10 minutes @230°C.

Polybutylene Terephthalate (PBT)

Specification: Base resin, IV equal to or less than 1.1 dL/g.

Polyoxymethylene (POM)

Specification: Natural (white) color. MFI tested per 10 minutes at 190°C/2.16kg.

Epoxy Resins

Specification: Transparent liquid, <1 Gardner color scale.

Rubber

Specification:

Emulsion styrene butadiene rubber (ESBR) 1500, 1502, 1723 and 1783.

Solution styrene butadiene rubber (SSBR): 25% styrene content and vinyl content ranging between 45% and 64%.

High-Cis polybutadiene rubber (H-PBR): cis content of 95% or above, a Mooney viscosity of 40-60 MU and maximum volatile matter of 0.75% wt.

Low-Cis polybutadiene rubber (L-PBR): cis content of 40% or below, a Mooney viscosity of 35-70 MU and maximum volatile matter of 0.75% wt.

Natural Rubber: Maximum dirt content of 0.16-0.2% wt, maximum ash content of 0.8-1%wt, maximum nitrogen content of 0.6%wt

Contract prices for Polymers

Polymer CPs: Reflect freely negotiated prices for deliveries under long-term agreements. These assessments reflect settlements and negotiations between sellers and buyers through the course of the delivery month. These contract prices are negotiated against an annual commitment to supply or procure regular monthly volumes. Contract price assessments do not include additional surcharges such as energy surcharges. Platts may use information on all contractually agreed volumes to form the basis of its assessments, although assessments will be normalized to reflect contractual commitments of 3,000-6,000 mt/year. In the absence of any outright contract price information, Platts will take price direction from the more liquid spot market. Platts may consider other market information including, but not limited to, deltas. Platts prioritizes transparent and verifiable data that has been tested in the market and reflects the negotiated and mutually-agreed absolute price. Platts assesses net (after discounts) and/or gross (before discounts) contract prices. FD NWE contract prices are calculated by converting FD Germany contract prices from euros to US dollars based on exchange rates as published by Platts.

Waste Bales and Recycled Polymers

Location: NWE assessments include Germany, France, Benelux region and Switzerland, unless otherwise stated.

PET Bottle Bales

Specification: Minimum of 80% clear PET content.

Recycled PET (R-PET)

Specification:

- **Flakes:** IV of 0.72-0.78; from 100% post-consumer recycled content. Clear and light blue flakes have been through a hot wash process.
- **Food-Grade Pellets:** Minimum IV of 0.8; derived from post-consumer virgin PET polymer.

Location: R-PET bales assessment excludes France.

Origin: Flake assessments reflect NWE and UK-produced flakes.

HDPE Bales

Specification: Post-consumer mixed HDPE bales; minimum 80% mixed colored HDPE by weight. Typical impurities, such as LDPE and PP, should not amount to more than 20% by weight.

© 2026 by S&P Global Inc. All rights reserved.

Recycled HDPE (R-HDPE)

Specification: Non-food-grade pellets derived from post-consumer virgin HDPE; extrusion/blow molding grade for consumer packaging applications. MFI is tested per 10 minutes @190°C/5kg

- **Light pellets:** light grey or beige colored pellets only.
- **Natural pellets:** natural, clear and transparent colored pellets. Odorless.

Origin: NWE-produced product.

LDPE Bales

Specification: Post-use 100% LDPE film sourced from distribution centers, retailers and companies. Bales are suitable for reprocessing into pellets with an MFI between 0.3-1.2 grams/10 minutes tested at 190 degrees Celsius/2.16kg.

- **Grade A Bales:** Minimum of 99% clear and a maximum of 1% non-clear LDPE film and label contamination.
- **Grade B Bales:** Minimum of 98% clear and a maximum of 2% non-clear LDPE film and label contamination.

Recycled LDPE (R-LDPE)

Specification: Derived from post-consumer waste. Black and gray pellets are non-odorless and non-food-grade. Translucent pellets are suitable for clear or transparent packaging, and are odorless and non-food-grade. MFI is tested per 10 minutes @190°C/2.16kg

Recycled Polypropylene (R-PP)

Specification: Derived from post-consumer waste. Pellets are non-odorless and non-food-grade. MFR is tested per 10 minutes at 230°C/2.16kg.

Recycled Polystyrene (R-PS)

Specification: Derived from post-consumer recycled materials which are non-odorless, non-food-grade, with a density of 1.04-1.07g/cm3. Pellets should have at least 30% HIPS and do not include any EPS.

Gray pellets include gray and whitish-gray pellets that do not contain black, white, or colored grades. MFI is tested per 10 minutes at 200°C.

Recycled ABS (R-ABS)

Specification: Injection grade ABS pellets made with 100% recycled content. Feedstock used to produce the pellets may be either post-consumer or post-industrial. These pellets should be for industrial applications, such as load bearing parts, construction products and household applications casings. Pricing information about pellets for use in auto interior, food contact, medical and toy applications will not be reflected directly in the assessment, but may be normalized to the standard, where appropriate. Density of 1.03-1.08g/cm3. Gray pellets include gray and whitish-gray pellets. Platts does not assess dark grey or anthracite grades. MFI is tested per 10 minutes at 220°C.

Mixed Plastic Waste Bales

Specification: Sorted, washed and shredded mixed plastic waste, suitable for recycling via pyrolysis: polyolefin (min 86%); polystyrene (max. 6%); PET (max 1%); PVC (max 1%); metals (max 1%); organics and moisture (max 5%), by weight.

European Recycled and Virgin Polymer Spot Price Spreads

Platts publishes weekly calculated spreads relating to its European recycled plastic and virgin polymer price assessments. The calculated spreads are between virgin polymers and their respective recycled grade as well as spreads within recycled plastic value chains.

Platts yield-adjusted post-consumer HDPE mixed bales spread to HDPE feedstock FD NWE assumes 1.25 mt of post-consumer HDPE mixed bales are required to produce 1 mt of R-HDPE pellets, and that 1.05 mt of ethylene is required to produce 1 mt of virgin HDPE. The spread reflects the difference in price between Platts post-consumer HDPE mixed bales FD NWE assessment multiplied by 1.25 and Platts ethylene FD NWE spot price multiplied by 1.05.

Platts also publishes similar spread calculations in Asia and North America.

Oxo-Alcohols

Specification:

- **Normal butanol (NBA):** Minimum purity of 99.5%. Maximum water content of 0.05%. Maximum color of 10 Hazen.
- **Iso-butanol (IBA):** Minimum purity of 99.5% and maximum water content of 0.05%. Maximum color of 10 Hazen.
- **2-Ethyl Hexanol (2-EH):** Minimum purity of 99.5%. Maximum water content of 0.1% and maximum acidity of 0.01%.

Phthalic anhydride (PA)

Specification: Minimum purity of 99.7%. Residual maleic anhydride content maximum 0.05%. Maximum color of 20 Hazen.

Acetic Acid (AA)

Specification: Minimum purity of 99.8%, maximum water content of 0.15% by weight, and maximum color of 10 Hazen.

Acetic Anhydride (AAn)

Specification: Minimum purity of 99.5%.

Vinyl Acetate Monomer (VAM)

Specification: Minimum purity of 99.9%, maximum water content of 400ppm.

Acrylonitrile (ACN)

Specification: Minimum purity of 99.4%, maximum water content of 0.5%, and maximum non-volatile bases content of 100ppm.

Ethylene Dichloride (EDC)

Specification: Minimum purity of 99.8%. Maximum water content of 200ppm. Maximum acidity is 10ppm.

© 2026 by S&P Global Inc. All rights reserved.

Vinyl Chloride Monomer (VCM)

Specification: Minimum purity of 99.9% and maximum water content of 100ppm.

Purified Terephthalic Acid (PTA)

Specification: Minimum purity of 95%. The PTA FD NWE daily spot price is derived by converting the daily spot paraxylene price (AAILD00) to euros, multiplying by 0.66 and adding an assessed premium.

Carbon Black

Specification:

- **N330:** particle size 25-35 nm
- **N550:** particle size 40-60 nm.

Glacial Acrylic Acid (GAA)

Specification: Minimum purity of 99.5%. MEHQ inhibitor of 10-20 ppm. Dimer of Max 2,000 ppm.

Acrylates

Specification:

- **Butyl Acrylates (BA):** Minimum purity of 99.5%. MEHQ inhibitor of 10-20 ppm.
- **2-Ethylhexyl Acrylates (2-EHA):** Minimum purity of 99.5%. MEHQ inhibitor of 10-20 ppm.

Methyl Methacrylate (MMA)

Specification: Maximum water content of 0.05%, color APHA of maximum 10 Hazen, a purity of 99.8% and an inhibitor of 10-20 ppm.

Bisphenol-A (BPA)

Specification: White prills, maximum water content of 100 ppm, maximum phenol content of 100 ppm, purity of 99.8%; freezing point of 156.5°C, and an ash content of 20 ppm.

Polyols

Specification: Conventional polyether polyols with a molecular weight of 3,000-3,500 g/mol.

Toluene Diisocyanate

Specification: T80 grade; minimum purity of 99.5%, Isomer content in 2,4 at 79-81%, and in 2,6 at 19-21%.

Solvent Naphtha

Specification: Minimum density of 0.870 g/ml @15°C, minimum aromatics content of 99%; maximum water content of 0.03%; maximum cumene content of 0.1%.

Solvent Toluene

Specification: ASTM D-841.

Solvent Xylene

Specification: ASTM D-843 with one or more isomers removed; maximum cumene content of 0.1%.

White Spirit

Specification:

- **Conventional:** Minimum density of 0.770 g/ml @15°C, minimum aromatics content of 15%; distillation range of 145-200 degrees Celsius; maximum cumene content 0.1%.
- **D40:** Dearomatized product, initial boiling point of 145-154 °C, flash point o 36-45 °C, dry point of 199-205 °C, colourless Saybolt 30 material.
- **D60:** Dearomatized product, initial boiling point of 160-189 °C, flash point of 60-67 °C, dry point of 210-245 °C, colourless Saybolt 30 material.

Hexane

Specification: Minimum C6 (hexane, isomers, and methyl-cyclopentane) content of 98%; minimum n-hexane content of 45%; maximum benzene content of 50ppm; maximum sulfur content of 200ppm; minimum boiling temperature of 65-70°C for food grade, 60-95°C for adhesive grades.

Phenol

Specification: Minimum purity of 99.9%; maximum water content of 0.08%.

Acetone

Specification: Minimum acetone content of 99%; maximum water content of 0.35%.

Ethyl Acetate (Etac)

Specification: Minimum purity of 99.5%, maximum water content of 0.05%, maximum alcohol content of 0.04%.

Butyl Acetate (Butac)

Specification: Minimum purity of 98%, maximum water content of 0.05%, maximum alcohol content of 0.5%.

Isopropyl Alcohol (IPA)

Specification: Maximum aromatics volume of 100ppm, maximum sulfur content of 1ppm and minimum product purity of 50%; minimum alcohol content of 99.5%, maximum water content of 0.3%.

Methyl Ethyl Ketone (MEK)

Specification: Minimum MEK content of 99%; maximum water content of 0.1%.

Chlor-Alkali

Caustic Soda

Specification: 50% solution commercial grade (membrane or diaphragm).

Indications in liquid metric tons (lmt) are taken into consideration and normalized to dmt on the basis that the caustic soda content of 4,000lmt is equal to that of 2,000dmt, unless otherwise stated.

Chlorine

Specification: Liquid/gas chlorine with a minimum purity of 99.5% by volume, moisture of 50 ppm max by weight.

Contract prices are calculated on the first Tuesday of the month at 4:30 pm London time and are published weekly. The fixed calculation takes Platts EDC FOB NWE spot price assessment in $/mt as assessed on the first Tuesday of the month, converted to euro and multiplied by 0.89 EDC chlorine content, minus Eur40/mt assumed production costs.

Hydrochloric Acid

Specification: Technical grade, produced as a by-product. HCL content of 30%-33%.

Soda Ash

Specification:

- **Light Soda Ash:** Density: 400-600 kg/m 3; water content: 0.05% max; sulphates: 0.15% max; purity: 99.0%
- **Dense Soda Ash:** Density: 800-1150 kg/m3; water content: 0.05% max; sulphates: 0.15% max; purity: 99.0%

Volume: Reflects a medium sized buyer.

Chemical and Polymer Freight

Platts assesses freight rates for liquid and gas chemicals as well as for some polymer routes. Please refer to the Shipping Methodology & Specifications | S&P Global

Global Chemical Indices

The indices' weighting factors reflect the relative sizes of the regional markets based on production capacity, as of 2025.

Platts Global Petrochemical Index (PGPI) is calculated based on the individual global product indices with the following weight distribution: 0.27 ethylene, 0.23 propylene, 0.11 benzene, 0.09 toluene, 0.11 paraxylene, 0.04 LDPE, and 0.15 PP.

The indices appear on Platts Chemical Alert (PCA) page 900.

Glossary

Incoterms

FD – free delivered

DDP – delivered duty paid

DAP – delivered at place

CFR – cost and freight

CIF – cost, insurance and freight

FOB – free on board

FCA – free carrier

Chemical abbreviations

MTBE – methyl tertiary-butyl ether

ETBE – ethyl tertiary-butyl ether

HDPE – high density polyethylene

LDPE – low density polyethylene

LLDPE – linear low density polyethylene

GPPS – general purpose polystyrene

HIPS – high impact polystyrene

EPS – expandable polystyrene

ESBR – emulsion styrene butadiene rubber

SSBR – solution styrene butadiene rubber

H-PBR - High-Cis polybutadiene rubber

L-PBR - Low-Cis polybutadiene rubber

LLDPE C4 – Butene grade LLDPE

LLDPE C6 – 1-Hexene grade LLDPE

Assessments

MMF – methanol marine fuel

EBOB – gasoline blendstock in Europe

Locations

NWE – Northwest Europe

ARA – Amsterdam, Rotterdam, Antwerp

AR – Amsterdam, Rotterdam

Quality

IV – intrinsic viscosity, a measure of molecular weight, or the degree of its polymerization

B* - a measure of the degree of yellowness of the PET resin

GP – general purpose

CSF – cast stretch film

Other abbreviations

CP – contract price

M1 – current month

M2 – second month

M3 – third month

M4 – fourth month

M5 – fifth month

Revision history

February 2026: Platts restated the description of its R-PS to Virgin PS spread. Platts launched recycled polystyrene grey and white pellet spreads to virgin GPPS. Platts discontinued gross contract price assessments for PVC and PET. Platts changed the frequency of the bisphenol-A, ethanolamines, nylons and polycarbonate spot assessments from daily to weekly. Platts clarified that European, North African, and Turkish general-purpose polystyrene and high-impact polystyrene assessments reflect food-grade material.

November 2025: Platts launched M1 and M2 MMA DDP NWE daily spot assessments Oct. 1. Platts launched D40 and D60 DDP NWE weekly spot assessments on Oct. 7. Platts launched a monthly methanol FOB Rotterdam net contract price Nov. 3.

October 2025: Platts launched HDPE PE100 Black weekly spot assessments on a DDP NWE, CFR Turkey and CFR Egypt basis September 3. Platts updated the global petrochemical indices weightings to reflect production capacities in 2025.

August 2025: Platts launched MX and toluene CIF-FOB ARA differential price assessment June 30.

July 2025: Annual review completed. Glossary added. Propylene oxide, isocyanate and polyols assessment frequencies changed to weekly, May 30. Mixed plastic waste bales daily assessment launched March 12, and cargo size clarified June 3. Methanol low-carbon marine fuel daily assessments launched May 2. Propylene glycols weekly spot price assessments launched April 25.

April 2025: Platts launched daily recycled polystyrene white pellet assessments March 26. Platts clarified its recycled polystyrene methodology to specify that assessments were for product derived from post-consumer waste. Platts amended its hydrochloric acid methodology to specify that assessments were for by-product hydrochloric acid delivered by truck or rail. Weekly and monthly average symbols were relocated within the specification guide for daily monoethylene, diethanolamine and triethanolamine FCA NWE assessments. Weekly and monthly average symbols for daily conventional polyether polyols and toluene diisocyanate DDP NWE assessments were also relocated within the guide.

February 2025: Platts added new symbols for conversion from Eur to USD for nylon, caprolactam, adipic acid, cyclohexane, r-PET and r-PE markets. Platts launched weekly DDP Northwest Europe polymethyl methacrylate (PMMA) price assessments, Dec. 11 and weekly DDP Northwest Europe liquid epoxy resins price assessments, Dec. 17.

December 2024: Platts launched weekly DDP Northwest Europe carbon black price assessments, Oct. 4. Platts launched weekly DDP Northwest Europe polyoxymethylene (POM) copolymer spot assessments, Oct. 30. Platts launched DDP Germany polybutylene terephthalate (PBT) neat resin weekly price assessment, Oct. 30. Platts removed the fixed premium applied to European molten phthalic anhydride spot prices, Oct 31. Platts launched weekly natural rubber Northwest Europe spot assessment, Nov 1. Platts launched weekly DAP Turkey acrylic staple fiber spot price assessment, Nov. 14.

October 2024: Platts launched a weekly European acetic anhydride assessment Sept. 19.

June 2024: Platts launched daily R-PET light blue flake spot assessments for Southern Europe, May 1. Platts launched Northwest Europe dense and light soda ash contract price assessments April 30. Platts discontinued the publication of the paraxylene industry-settled monthly contract, May 31. Platts discontinued the PTA FD NWE contract price calculation on June 3 and launched daily spot PTA FD NWE price assessments. Annual review completed.

April 2024: Platts launched European cyclohexane, adipic acid, caprolactam, nylon 6, nylon 66, methyl methacrylate, ethanolamines; MEA, DEA, TEA, conventional polyether polyols, toluene diisocyanate, glacial acrylic acid, butyl acrylates, 2-ethylhexyl acrylates assessments and spreads for recycled PP natural pellets - virgin PP, recycled PS black pellets - virgin HIPS, recycled ABS black pellets - virgin ABS on April 2.

March 2024: Platts launched European EVA, polycarbonate and Recycled ABS assessments on March 1.

February 2024: Platts launched European PBR assessments on Feb 2. Platts launched European hydrochloric acid assessments on Feb. 6.

January 2024: Platts changed frequency of ethylene CIF Med and chemical grade propylene FD and CIF NWE spot assessments to daily, Oct.2. Platts launched ethylbenzene, tri-ethylene glycol, propylene oxide, ethylene oxide and bisphenol A assessments, Dec.1. Platts launched publication of a weekly phenol premium, Dec.5. Platts specified cumene content of a maximum 0.1% for solvent naphtha, solvent mixed xylenes and white spirit, Dec. 12. Platts Global Chemical Indices table included into the guide.

August 2023: Platts launched an eMethanol assessment on June 19. Platts updated the monthly average fixed pages for styrene, MTBE and methanol. Platts discontinued CFR Russia assessments for PVC.

June 2023: Platts launched two recycled polystyrene pellets daily spot assessments for Northwest Europe on May 3, 2023. Platts clarified its FOB AR ETBE assessment reflects material with a maximum carbon intensity (CI) of 41.90gCO2e/MJ based on the prevailing fossil fuel comparator under EU Renewable Energy Directive (RED) requirements.

May 2023: Platts completed an annual review of the guide, reviewing all content, adding an explanation of the Platts yield-adjusted post-consumer HDPE mixed bales spread to HDPE feedstock and making minor edits to language throughout. Platts adds Turkish polymer cargo sizes.

© 2026 by S&P Global Inc. All rights reserved.

February 2023: Platts clarified the methodology for publishing industry-settled OX and PX contract prices.

January 2023: The specification guide has been renamed to European Chemicals.

December 2022: Platts updated weightings for global chemical indices.

September 2022: Platts launched LDPE bales daily spot assessments for Northwest Europe on Aug. 1, 2022. Platts clarified the exclusion of additional surcharges including energy surcharges from its polymers contract price assessments on Sept. 12, 2022.

July 2022: Platts discontinued CFR Russia assessments for polyethylene and polypropylene. Platts also added M1 and M2 FOB Rotterdam assessments for methanol.

June 2022: Platts narrowed the location for FOB NWE SBR spot assessments to reflect all major Northwest European ports, basis Rotterdam, and no longer includes Italy and Spain.

May 2022: Platts clarified the OX and PX contract price methodology, and removed duplicate symbols from the methanol assessments table.

April 2022: Platts completed an annual review of this guide, reviewing all content, and making minor edits to language throughout.

February 2022: Platts revised minimum and maximum cargo size for FCA and FD MEG and DEG spot assessments and narrowed the location for FCA and CIF MEG and FCA DEG spot assessments to Amsterdam, Rotterdam, Antwerp (ARA), basis Antwerp.

December 2021: Platts launched a daily assessment of methanol bunker fuel delivered to Rotterdam in September 2021, additionally introducing calculations that convert the methanol bunker assessment to the energy equivalent content of LNG and fuel oil to enable comparison with other marine fuels.

October 2021: Platts added price spread calculations for recycled and virgin polymers.

July 2021: In June 2021, Platts introduced daily assessments of R-PP black and natural pellets DDP Northwest Europe and changed the purity specification of its ETBE FOB AR assessment.

May 2021: Platts completed an annual update of its European petrochemicals specifications guide, reviewing all content and making minor edits throughout. In this update, Platts added further detail on laycan correspondences for toluene and mixed xylenes spreads to Eurobob gasoline swaps and clarified delivery locations for CFR West Africa polymers.

April 2021: In March 2021, Platts revised the minimum and maximum cargo size for FD NWE and FCA Antwerp polyethylene spot assessments, introduced daily assessments of R-LDPE black pellets, grey pellets and translucent pellets DDP Northwest Europe and discontinued its benzene FOB Rotterdam assessment to focus on the more liquid CIF ARA market.

January 2021: Platts specified maximum carbon intensity instead of Greenhouse Gas saving equivalent for its ETBE FOB AR assessment.

December 2020: Platts introduced a daily assessment of R-HDPE natural pellets FD Northwest Europe. In November 2020, Platts discontinued its AA and VAM FOB NWE assessments due to low liquidity.

October 2020: Platts specified timing for the provision of ETBE sustainability documentation and renamed the assessment description for the ETBE differential to MTBE from ETBE premium to ETBE spread. Platts introduced a dollars per metric ton to dollars per barrel conversion rate for MTBE and ETBE and specified existing nomination periods for MTBE and ETBE to align with the Petrochemicals timing and increment guidelines.

August 2020: In July 2020, Platts introduced daily assessments of post-consumer mixed HDPE bales for Northwest Europe and changed the frequency of HDPE FD NWE and HDPE FCA Antwerp spot assessments from weekly to daily.

May 2020: Platts introduced daily assessments of R-PET mixed colored flakes and changed the frequency of all R-PET assessments from weekly to daily. Platts completed an annual update of its European petrochemicals specifications guide, reviewing all content and making minor edits throughout. In this update, Platts clarified olefins modes of transport, added detail on IMPCA product specifications applicable to methanol, updated sustainability criteria wording for ETBE and reconciled inconsistencies between text and tables.

April 2020: Platts changed the quantity, delivery periods and nomination procedures reflected in its mixed xylene and toluene assessment processes and revised the non-aromatics content in its mixed xylene assessments to maximum 3%. Platts updated the gasoline components section of the guide to reflect the facilitation of the ETBE Market-on-Close assessment process through the eWindow communication tool and added a description of the ETBE spread to MTBE. Platts introduced a caustic soda CFR Med assessment, revised the location and cargo size specifications of its caustic soda FOB assessment, clarified that the unit of measure for caustic soda is dry metric tons and discontinued the caustic soda contract price. Platts introduced a fixed calculation for the chlorine contract price. In March 2020, Platts introduced a daily assessment of the MTBE spread to the Eurobob gasoline front-month financial derivative. In March 2020, Platts introduced a daily CFR Turkey PP fiber assessment and updated the location column for CFR North Africa and CFR West Africa in the polymer tables. Platts

updated inconsistencies in the text where CFR North Africa was referred to as CFR Africa and added missing references to CFR West Africa.

January 2020: Platts introduced daily R-HDPE light pellet assessment for Northwest Europe. Platts clarified location for UK PET assessments.

July 2019: Platts revised R-PET flake specifications for UK and Northwest Europe assessments.

June 2019: Platts introduced a new post-consumer PET bottle bale assessment.

May 2019: Platts updated its European polymer methodology to clarify the hierarchy of information used in contract price assessments and to further clarify that its UK polymer assessments are basis FD UK. Platts also updated its Recycled-PET flake methodology to better differentiate hot-wash flake assessments from food grade pellets. Platts also completed an annual update of its European petrochemicals methodology & specifications guide. In this update, Platts reviewed all content and made minor edits throughout.

May 2019: Platts discontinued publishing the industry-settled styrene FOB ARA monthly contract price. Platts discontinued the monthly average of its methanol FOB Rotterdam weekly calculation. Platts completed an annual update to sections 1 to 6 of Platts Methodology and Specifications Guides in April 2019, and moved these sections into a standalone Methodology Guide.

March 2019: Platts discontinued the ACN CIF MED assessment due to low liquidity.

February 2019: Platts introduced new food grade pellet recycled PET assessments.

December 2018: Platts clarified Eurobob gasoline codes used for mixed xylene, toluene assessments.

December 2018: Platts moved chemicals freight methodology and tables to Freight methodology and specifications guide.

October 2018: Platts updated the Aromatics and methanol table to correct the incoterm listed for Methanol T2 FOB Rotterdam quarterly contract.

August 2018: Platts updated the Aromatics and methanol table to correct the code listed for Mixed Xylene CIF ARA, the currency for Methanol T2 FOB Weekly Rotterdam and the contract type for Paraxylene FOB ARA Mo02. Platts also updated the Gasoline components table to include the full assessment descriptions for MTBE FOB ARA factor, ETBE FOB AR, ETBE Premium FOB AR, Rafffinate-1 CIF NWE Weekly and Raffinate-1 CIF NWE Factor Weekly.

July 2018: Standardized the wording around industry-settled contract prices across the olefins, aromatics and methanol sections, and clarified that Platts will not publish a contract price if a full settlement is not reached. References to Platts currency conversions of industry-settled CPs were removed from the text and added to tables as needed.

May 2018: Platts updated the section "Aromatics MOC window guidelines" to include revised expectations surrounding vessel performance in its CIF ARA aromatics assessment windows.

May 2018: Platts corrected the April 2018 revision history to remove an erroneous reference to PCA Guidelines. The April 2018 update had incorrectly stated that text had been moved to the PCA Guidelines document during the annual methodology review.

April 2018: As part of the annual methodology review, we simplified language and deleted/moved repetitive language on normalization, which is included in Parts I-VI.

April 2018: Platts moved publication of EDC/VCM assessments in Europe to Tuesday from Thursday.

April 2018: Platts amended the codes listed for its Propylene Contract Price Indicator.

January 2018: Platts amended intermediates methodology for PTA and PA. Platts harmonized toluene and mixed xylenes assessments by discontinuing nitration grade toluene and solvent grade MX.

November 2017: Platts launched CIF ARA mixed xylene month 1 and month 2 assessments, and toluene and mixed xylene month 1 and month 2 spreads to corresponding Eurobob gasoline FOB ARA swaps.

September 2017: Platts launched CIF ARA toluene assessments and tied its existing FOB ARA prices to the CIF ARA value.

August 2017: Platts clarifies vessel performance in European CIF ARA aromatics MOC window guidelines.

July 2017: Platts to assess CFR Turkey polymer prices exclusive of duty. Platts clarifies FOB specifications for styrene butadiene rubber and revises vinyl content for SSBR.

June 2017: Platts updated the codes for Platts cracker margins.

April 2017: [Annual Review] Platts launched MX CIF ARA assessment and tied its existing FOB ARA prices to the CIF ARA value. Platts revised the MOC guidelines for CIF markets allowing bids and offers for dated barrels in no shorter than 10 day strips. Platts also revised its approach to aromatics contract price publication in case of split settlements. In addition, Platts added a gas chemical freight methodology to the complement the existing easy liquid freight methodology.

January 2017: Platts to no longer take price deltas into consideration for assessing European polymer contract prices. (See May 2019 update.)

December 2016: Platts discontinued several chemical freight assessments, including for freight rate for liquid chemicals from

© 2026 by S&P Global Inc. All rights reserved.

Europe to Brazil and for VCM freight routes from Europe and the US to Turkey.

November 2016: Platts discontinued the styrene FCA Rotterdam truck contract price. Platts launched benzene month-ahead contract price indicator.

June 2016: Platts launches C2,C3 month gross contract price assessments. Platts also launched M1,M2 spot price assessments for European C2,C3. Platts revised aromatics MOC window guidelines on loading/delivery dates.

March 2016: Platts revised the individual regional weighting to each product based on their regional capacity, for the Global Petrochemical Indices.

February 2016: [Annual Review] Platts clarified the loading dates for EDC/VCM and minimum/maximum quantity for DEG. Platts clarified that PVC CFR Russia is also assessed in $/mt. Platts clarified that Raffinate is assessed as CIF NWE. Platts updated hexane specifications to reflect a methodology change regarding benzene and sulphur content.

February 2016: Platts clarified the loading dates for EDC/VCM and minimum/maximum quantity for DEG. Platts clarified that PVC CFR Russia is also assessed in $/mt. Platts clarified that Raffinate is assessed as CIF NWE. Platts updated hexane specifications to reflect a methodology change regarding benzene and sulphur content.

August 2015: Platts clarified minimum and maximum volumes for spot polymer assessments. Platts clarified delivery period for contract polymer assessments is the month of publication. Platts clarified it also used butadiene in the contract cracker margin calculations. Platts clarified loading period and standard parcel volumes for MTBE. Platts clarified loading/delivery period for acetic acid, VAM and oxygenated solvents. Platts added basis location for FD and CIF NWE assessments of ethylene and propylene.

April 2015: Platts discontinued publication of acetone T1, MIBK and benzene forward quarterly assessments. Platts also discontinued publication of the hydro xylene FOB ARA code (PHAGD00) and replaced it with mixed xylene code (PHAAW00). Platts introduced spot assessments for LLDPE standard C6 (AAQCY00) and metallocene C6 (AAQCZ00).

March 2015: Platts clarified European polymer contract price assessments by further defining the parameters. Platts added 'spot' in PET and ABS cargo sizes.

February 2015: Platts changed the frequency of the mixed xylenes and orthoxylene assessments to daily.

January 2015: Platts discontinued dioctyl phthalate assessments from January 2, 2015 and revised the specifications of the mixed xylenes reflected in the virgin/isomer and solvent grade xylenes. Platts reduced the ethyl-benzene content to a maximum of 20% from previous 55-60%, eliminated the limits on metaxylene, paraxylene and orthoxylene, which were previously set at 15-20%, and reduced the non-aromatics content to 2% from 4% maximum for solvent grade. For isomer/virgin grade Platts increased the non-aromatics content to 2% from previously set 1%.

November 2014: Platts amended olefins, aromatics and methanol contract price methodology. Platts publishes contract price settlements once it has obtained information that two buyers and two sellers have agreed the same price.

August 2014: Platts revamped all Petrochemical Methodology and Specifications Guides, including its European Petrochemical guide, in August 2014. This revamp was completed to enhance the clarity and usefulness of all guides, and to introduce greater consistency of layout and structure across all published methodology guides. Methodologies for market coverage were not changed through this revamp, unless specifically noted in the methodology guide itself.
