Definitions of the trading locations for which Platts publishes indexes or assessments

The following specifications guide contains the primary specifications for S&P Global Energy's Platts global fertilizer assessments. All the assessments listed here employ Platts Assessments Methodology, as published at https://www.spglobal.com/commodityinsights/plattscontent/_assets/_files/en/our-methodology/methodology-specifications/platts-assessments-methodology-guide.pdf

These guides are designed to give our subscribers as much information as possible about a wide range of methodology and specification questions.

This guide is current at the time of publication. S&P Global may issue further updates and enhancements to this guide and will announce these to subscribers through its usual publications of record. Such updates will be included in the next version of this guide. Our editorial staff and managers are available to provide guidance when assessment issues require clarification.

The following global fertilizers guide contains the primary specifications and methodologies for S&P Global fertilizer assessments throughout the world. The various components of this guide are designed to give our subscribers as much information as possible about a wide range of methodology and specification issues.

Fertecon's individual fertilizer market assessments can cover a broad range of load ports or markets, product grades or other specifications. Where this is the case, these differences are captured in the published low-high range for the market in question. The low-high range does not represent different tradeable values for product with the same specifications.

Any calculated FOB netbacks fertilizer and minerals assessments that are based on FOB US assessments will also account for the subtraction of the prevailing tariff, where relevant. Where these netbacks are published as ranges, incorporating multiple origins, any difference in duty rates between the countries of origin will be accounted for in the published range.

Any FOB netbacks based on CFR US assessments will not include any additional subtraction of duty, since customs clearance is not included in the original assessment.

Fertecon weekly/bi-weekly market assessments are determined from information gathered during the period prior to publication of the report up to 16.30 Penang, London, or Sao Paulo (timestamp depending on assessment) on the day of publication, with greatest weight given to inputs received nearest to the close of the assessment period. Market information received after this time will contribute to the assessments published in the following full publication.

Ammonia

Asia

FOB Southeast Asia – daily

Quality: Anhydrous ammonia, which is around 82% Nitrogen and stored and transported as a liquid under pressure at around -33 degrees Celsius, with no restrictions on carbon intensity.

Quantity: 5,000-15,000 mt

Basis and location: FOB Bontang, Indonesia. Price information relating to ports in other relevant countries such as Indonesia, Malaysia, and Australia, may be considered and normalized, where necessary.

Timing: Loading 1-6 weeks forward.

Frequency: Daily

Unit of assessment: $/mt

Timestamp: 16:30 Penang close, published according to the Penang publishing calendar

FOB Southeast Asia – weekly

The weekly range assessment – FOB Southeast Asia reflects the lowest and the highest of the daily FOB Southeast Asia assessments published over the course of the preceding week (Friday – Thursday).

CFR Far East - daily

Quality: Anhydrous ammonia, which is around 82% Nitrogen and stored and transported as a liquid under pressure at around -33 degrees Celsius, with no restrictions on carbon intensity.

Quantity: 5,000-15,000 mt

Basis and location; CFR Ulsan, South Korea.

Timing: Delivery 1-6 weeks forward.

Frequency: Daily

Unit of assessment: $/mt

Timestamp: 16:30 Penang close, published according to the Penang publishing calendar

CFR Mainland China

Quality: Anhydrous ammonia, which is around 82% Nitrogen and stored and transported as a liquid under pressure at around -33 degrees Celsius, with no restrictions on carbon intensity.

Quantity: 5,000-15,000 mt

Basis and location: CFRCaojing, China.

Timing: Delivery 1-6 weeks forward.

Frequency: Daily

Unit of assessment: $/mt

Timestamp: 16:30 Penang close, published according to the Penang publishing calendar

CFR Taiwan

Quality: Anhydrous ammonia, which is around 82% Nitrogen and stored and transported as a liquid under pressure at around -33 degrees Celsius, with no restrictions on carbon intensity.

Quantity: 5,000-15,000 mt.

Basis and location: CFR Kaohsiung, Taiwan.

Timing: Delivery 1-6 weeks forward.

Frequency: Daily

Unit of assessment: $/mt

Timestamp: 16:30 Penang close, published according to the Penang publishing calendar

CFR Japan

Quality: Anhydrous ammonia, which is around 82% Nitrogen and stored and transported as a liquid under pressure at around -33 degrees Celsius, with no restrictions on carbon intensity.

Quantity: 5,000-15,000 mt.

Basis and location: CFR Niihama, Japan.

Timing: Delivery 1-6 weeks forward.

Frequency: Daily

Unit of assessment: $/mt

Timestamp: 16:30 Penang close, published according to the Penang publishing calendar

CFR Far East - weekly

The weekly range assessment - CFR Far East reflects the lowest and the highest of the daily CFR Far East, CFR Mainland China, CFR Taiwan and CFR Japan assessments published over the course of the preceding week (Friday – Thursday).

CFR Southeast Asia

Quality: Anhydrous ammonia, which is around 82% Nitrogen and is stored and transported as a liquid under pressure at around -33 degree Celsius, with no restrictions on carbon intensity.

Quantity: 3,500-6,000 mt

Basis and location: CFR Haiphong, Vietnam. Price information relating to ports in other relevant countries such as in Vietnam, Thailand, the Philippines, Indonesia, Malaysia and Singapore may be considered and normalized, where necessary.

Timing: Delivery 1-6 weeks forward.

© 2026 by S&P Global Inc. All rights reserved.

Frequency: Daily

Unit of assessment: $/mt

Timestamp: 16:30 Penang close, published according to the Penang publishing calendar

CFR Singapore

Quality: Anhydrous ammonia, which is around 82% Nitrogen and is stored and transported as a liquid under pressure at around -33 degree Celsius, with no restrictions on carbon intensity.

Quantity: 3,000-4,000 mt

Basis and location: CFR Singapore. Price information relating to other ports in Southeast Asia may be considered and normalized, where necessary.

Timing: Delivery 1-6 weeks forward.

Frequency: Daily

Unit of assessment: $/mt

Timestamp: 16:30 Penang close, published according to the Penang publishing calendar

China Domestic EXW Jiangsu

Quality: Anhydrous ammonia, which is around 82% Nitrogen and is stored and transported as a liquid under pressure at around -33 degree Celsius, with no restrictions on carbon intensity.

Quantity: 25 mt

Basis and location: EXW Jiangsu, China

Timing: Loading 1-7 days forward

Frequency: Daily

Unit of assessment: Yuan per mt

Timestamp: 16:30 Penang close, published according to the Penang publishing calendar

CFR West Coast India

Quality: Anhydrous ammonia, which is around 82% Nitrogen and is stored and transported as a liquid under pressure at around -33 degree Celsius, with no restrictions on carbon intensity

Quantity: 25,000 mt

Basis and location: Spot. CFR Kandla.

Timing: Delivery 1-6 weeks forward

Frequency: Daily

Unit of assessment: $/mt

Timestamp: 16:30 London close, published according to the London publishing calendar

CFR East Coast India

Quality: Anhydrous ammonia, which is around 82% Nitrogen and is stored and transported as a liquid under pressure at around -33 degree Celsius, with no restrictions on carbon intensity

Quantity: 25,000 mt

Basis and location: CFR Paradeep.

Timing: Delivery 1-6 weeks forward

Frequency: Daily

Unit of assessment: $/mt

Timestamp: 16:30 London close, published according to the London publishing calendar

CFR India

The weekly range assessment - CFR India reflects the lowest and the highest of the daily CFR West Coast India and CFR East Coast India assessments published over the course of the preceding week (Friday – Thursday).

EMEA

FOB Middle East – daily

Quality: Anhydrous ammonia, which is around 82% Nitrogen and is stored and transported as a liquid under pressure at around -33 degree Celsius, with no restrictions on carbon intensity

Quantity: 25,000 mt

Basis and location: FOB Ras Al Khair, Saudi Arabia. Excludes Iran

Timing: Loading 1-6 weeks forward

Frequency: Daily

Unit of assessment: $/mt

Timestamp: 16:30 London close, published according to the London publishing calendar

FOB Middle East - weekly

The weekly range assessment - FOB Middle East reflects the lowest and the highest of the daily FOB Middle East assessments published over the course of the preceding week (Friday – Thursday). A third close value for the weekly assessment is published, reflecting market value at 16:30 London each Thursday, mirroring the day's daily assessment.

FOB Black Sea - daily

Quality: Anhydrous ammonia, which is around 82% Nitrogen and is stored and transported as a liquid under pressure at around -33 degree Celsius, with no restrictions on carbon intensity

Quantity: 15,000 mt

© 2026 by S&P Global Inc. All rights reserved.

Basis and location: FOB Taman, Russia

Timing: Loading 1-6 weeks forward

Frequency: Daily

Unit of assessment: $/mt

Timestamp: 16:30 London close, published according to the London publishing calendar

FOB Black Sea - weekly

The weekly range assessment - FOB Black Sea reflects the lowest and the highest of the daily FOB Black Sea assessments published over the course of the preceding week. A third close value for the weekly assessment is published, reflecting market value at 16:30 London each Thursday, mirroring the day's daily assessment.

FOB Baltic - daily

Quality: Anhydrous ammonia, which is around 82% Nitrogen and is stored and transported as a liquid under pressure at around -33 degree Celsius, with no restrictions on carbon intensity

Quantity: 15,000 mt

Basis and location: FOB Ust Luga, Russia

Timing: Loading 1-6 weeks forward

Frequency: Daily

Unit of assessment: $/mt

Timestamp: 16:30 London close, published according to the London publishing calendar

FOB Baltic - weekly

The weekly FOB Baltic assessment reflects the lowest and the highest of the daily FOB Baltic assessments published over the course of the preceding week. A third close value for the weekly assessment is published, reflecting market value at 16:30 London each Thursday, mirroring the day's daily assessment.

FOB North Africa

Quality: Anhydrous ammonia, which is around 82% Nitrogen and is stored and transported as a liquid under pressure at around -33 degree Celsius, with no restrictions on carbon intensity.

Quantity: 15,000 mt.

Basis and location: Spot. FOB Arzew, Algeria.

Timing: Loading 1-6 weeks forward.

Frequency: Daily

Unit of assessment: $/mt

Timestamp: 16:30 London close, published according to the London publishing calendar

CFR Turkey

Quality: Anhydrous ammonia, which is around 82% Nitrogen and is stored and transported as a liquid under pressure at around -33 degree Celsius, with no restrictions on carbon intensity

Quantity: 15,000 mt

Basis and location: CFR Mediterranean Sea ports, Turkey

Timing: Delivery 1-6 weeks forward.

Frequency: Daily

Unit of assessment: $/mt

Timestamp: 16:30 London close, published according to the London publishing calendar

CFR North Africa

Quality: Anhydrous ammonia, which is around 82% Nitrogen and is stored and transported as a liquid under pressure at around -33 degree Celsius, with no restrictions on carbon intensity.

Quantity: 25,000 mt

Basis and location: CFR Jorf Lasfar, Morocco

Timing: Delivery 1-6 weeks forward

Frequency: Daily

Unit of measurement: $/mt

Timestamp: 16:30 London close, published according to the London publishing calendar

CFR Med Region - weekly

The weekly range assessment - CFR Med region reflects the lowest and the highest of the daily CFR Turkey and CFR North Africa assessments published over the course of the preceding week (Friday – Thursday).

CFR NW Europe (duty paid/duty free) - daily

Quality: Anhydrous ammonia, which is around 82% Nitrogen and is stored and transported as a liquid under pressure at around -33 degree Celsius, with no restrictions on carbon intensity.

Quantity: 15,000 mt

Basis and location: T2 spot product, CFR NWE, basis Antwerp/Rotterdam (assessment considers market activity at ammonia-importing terminals in NWE, defined as Finland-France range)

Timing: Delivery 1-6 weeks forward

Frequency: Daily

Unit of assessment: $/mt

© 2026 by S&P Global Inc. All rights reserved.

Timestamp: 16:30 London close, published according to the London publishing calendar

CFR NW Europe (duty paid/duty free) - weekly

The weekly CFR NW Europe duty paid/duty free range assessment reflects the lowest and the highest of the daily CFR NW Europe duty paid/duty free assessments published over the course of the preceding week. A third close value for the weekly assessment is published, reflecting market value at 16:30 London each Thursday, mirroring the day's daily assessment.

CFR NW Europe (duty unpaid) - daily

Quality: Anhydrous ammonia, which is around 82% Nitrogen and is stored and transported as a liquid under pressure at around -33 degree Celsius, with no restrictions on carbon intensity

Quantity: 15,000 mt

Basis and location: T1 spot product, CFR NWE, basis Antwerp/Rotterdam (assessment considers market activity at ammonia-importing terminals in NWE, defined as Finland-France range). In lieu of price information, the assessment will consistently sit at a 5.5% discount to the daily CFR NW Europe duty paid/free assessment – reflecting the EU's third party duty

Timing: Delivery 1-6 weeks forward

Frequency: Daily

Unit of assessment: $/mt

Timestamp: 16:30 London close, published according to the London publishing calendar

CFR NW Europe (duty unpaid) - weekly

The weekly range assessment - CFR NW Europe duty unpaid reflects the lowest and the highest of the daily CFR NW Europe duty unpaid assessments published over the course of the preceding week. A third close value for the weekly assessment is published, reflecting market value at 16:30 London each Thursday, mirroring the day's daily assessment.

Calculated CBAM Cost

The Calculated CBAM Cost is a weekly value that reflects costs associated with the EU Carbon Border Adjustment Mechanism (CBAM) for ammonia being delivered to Northwest Europe.

It is calculated using the following formula and inputs:

(A – (B*C) * D = Calculated CBAM Cost

A: The typical carbon intensity of ammonia imported into Northwest Europe – currently 2.2 mt CO2e

B: The prevailing European Commission free allowance benchmark for ammonia

C: The official European Commission multiplier for the phase out of free allowances from 2026 to 2034

D: The Platts EU Allowance Nearest December €/mt assessment (EADMP04) converted into US$

Frequency: Weekly

Unit of assessment: $/mt

Timestamp: 16:30 London, published according to the London publishing calendar

Americas

CFR US Gulf/Tampa – daily

Quality: Anhydrous ammonia, which is around 82% nitrogen and is stored and transported as a liquid under pressure at around minus 33 degrees Celsius, with no restrictions on carbon intensity.

Quantity: 25,000 mt

Basis and location: CFR Tampa, Florida.

Timing: Delivery one to six weeks forward.

Frequency: Daily

Unit of assessment: $/mt

Timestamp: 16:30 São Paulo, published according to the São Paulo publishing calendar

CFR Tampa, CP

Quality: Anhydrous ammonia, which is around 82% nitrogen and is stored and transported as a liquid under pressure at around -33 degrees Celsius, with no restrictions on carbon intensity.

Quantity: 25,000 mt.

Basis and location: Contract cargoes only; basis CFR Tampa, Florida.

The CFR Tampa assessment reflects the monthly ammonia contract between Yara and Mosaic. The assessment is updated as soon as a new CP is agreed, communicated, and confirmed by Platts

Timing: Product delivered under the latest monthly Tampa contract agreement

Frequency: Published on confirmation of the monthly settlement value

Unit of assessment: $/mt

Timestamp: The assessment follows Global publishing schedule. In the event of a global holiday, the assessment would be published on the next working day and would appear in the next weekly Ammonia Market Report.

© 2026 by S&P Global Inc. All rights reserved.

FOB US Gulf

Quality: Anhydrous ammonia, which is around 82% Nitrogen and is stored and transported as a liquid under pressure at around -33 degree Celsius, with no restrictions on carbon intensity.

Quantity: 25,000 mt

Basis and location: FOB Donaldsonville, Louisiana. Other loading ports in Texas and Louisiana will also be considered and normalized where necessary for assessment purposes.

Timing: Loading one to six weeks forward.

Frequency: Daily

Unit of assessment: $/mt

Timestamp: 16:30 São Paulo, published according to the São Paulo publishing calendar

FOB NOLA Brg

Quality: Anhydrous ammonia, which is around 82% Nitrogen and is stored and transported as a liquid under pressure at around -33 degree Celsius.

Quantity: Minimum 1,500 st

Basis and location: FOB barge New Orleans, Louisiana

Timing: Product to be shipped up to thirty days forward.

Frequency: Weekly

Unit of assessment: $/st

Timestamp: 16:30 São Paulo, published according to the São Paulo publishing calendar

FOB Caribbean - daily

Quality: Anhydrous ammonia, which is around 82% Nitrogen and is stored and transported as a liquid under pressure at around -33 degree Celsius, with no restrictions on carbon intensity

Quantity: 25,000 mt

Basis and location: Contract cargoes only. FOB Point Lisas, Trinidad and Tobago. The assessment reflects a netback from CFR Tampa (FATCA04)

Timing: Monthly, product loading under the latest monthly Tampa contract agreement

Frequency: Daily

Unit of assessment: $/mt

Timestamp: 16:30 São Paulo, published according to the São Paulo publishing calendar

FOB Caribbean -weekly

The weekly range assessment – FOB Caribbean reflects the lowest and the highest of the daily FOB Caribbean assessments published over the course of the preceding week (Friday-Thursday).

Low-carbon Ammonia

Asia

Japan Korea Ammonia Price (JKAP)

Quality: Anhydrous ammonia, which is around 82% Nitrogen and is stored and transported as a liquid under pressure at around -33 degree Celsius.

Quantity: 15,000-25,000 mt, normalized where necessary to 15,000 mt

Basis and location: Spot, CFR Japan and South Korea, basis Nagoya

Carbon Intensity: Maximum 0.87 kg CO2eq/kg ammonia well to gate excluding transportation to the point of CFR delivery.

Timing: Product to be loaded 1-6 weeks forward.

Frequency: Daily

Unit of assessment: $/mt

Timestamp: 16:30 Penang close, published according to the Penang publishing calendar

Platts also has carbon intensity escalators for Korea and Japan that can be used to normalize bids, offers and trades of ammonia with a CI below the 40gCO2e/MJ JKAP threshold. For specifications relating to the CI escalator, see our Methodology and Specifications Guide for Global Hydrogen and Ammonia.

Japan Ammonia Energy Substitution Index (AESI)

The Ammonia Energy Substitution Index (AESI) is a demand side value index that assesses the price at which potential buyers, in this case energy suppliers, would be willing to pay for ammonia as a substitution energy source.

Basis: A reference assessment using joint dynamics of reference fuel prices (coal, natural gas), emission tariffs and green credits for carbon-free generation, and wholesale power prices. Data is sourced within S&P Global's extensive internal resources and publications dedicated to energy and feedstock markets.

Frequency: Weekly

Unit of Assessment: $/mt

Timestamp: 16:30 London close, published according to the London publishing calendar

Americas

US Gulf Ammonia Price (UGAP)

Quality: Anhydrous ammonia, which is around 82% Nitrogen and is stored and transported as a liquid under pressure at around -33 degree Celsius.

Quantity: 25,000 mt

Basis and location: FOB Donaldsonville, Louisiana. Other loading ports in Texas and Louisiana will also be considered and normalized where necessary for assessment purposes.

Carbon Intensity: Maximum 0.87 kg CO2eq/kg ammonia well to gate

Timing: Loading one to six weeks forward.

Frequency: Daily

Unit of assessment: $/mt

Timestamp: 16:30 São Paulo, published according to the São Paulo publishing calendar.

For methodology and specifications relating to model-based low-carbon ammonia, including Platts' Renewable Power Derived Ammonia and Blue Ammonia Premiums, and Ammonia Forward Curve Assessments, please see the Methodology and Specifications Guide Global Hydrogen and Ammonia.

Ammonia Forward Curve Assessment

Platts Ammonia Forward Curve assessments reflect the price of ammonia for forward physical delivery in the months published in Northwest Europe. Forward prices are reflective of the prevailing market for the published months and may be adjusted to reflect seasonality between ammonia and its feedstocks, including natural gas. Other factors, reflecting market sentiment in the broader commodity markets, also may be considered.

Quality: Minimum purity of 99.5% of anhydrous ammonia by weight, a maximum water content of 0.5% by weight, and a maximum oil content of 10 ppm by weight.
Further Assumptions: The Platts ammonia valuations are published to two decimal places.

Quantity: N/A

Timing: The months roll forward on the 1st day of each month or the nearest business day thereafter. For example, on January 1, 2025, Platts assesses the forward months of February, March and April.

Basis and Location: CFR Northwest Europe.

Frequency: Daily

Unit of assessment: Platts assesses ammonia forward curves in USD per metric ton and USD per MMBtu.

Timestamp: 16:30 London, published according to the London publishing calendar.

Credit terms: Assessments are cash prices, net of any credit. Platts may use information with longer credit terms after normalization.

Phosphates

Diammonium Phosphate (DAP)/Monoammonium Phosphate (MAP)

Americas

FOB US Gulf, Bulk

The low and high of the weekly range assessment DAP/MAP FOB US Gulf, Bulk reflects the weekly FOB Tampa DAP & FOB Tampa MAP assessments published on the same day. No fresh market information is taken into account.

Diammonium Phosphate (DAP)

Asia

FOB China River

Quality: Dark brown DAP with nitrogen content of 18%, a standard P205 content of 46%, and a maximum moisture content of 2.5%

Quantity: 45,000 mt

Basis and Location: FOB Zhenjiang, China

Timing: Loading 25-50 days forward

Frequency: Weekly

Unit of assessment: $/mt

Timestamp: 16:30 Penang close, published according to the Penang publishing calendar

FOB China South

Quality: Dark brown DAP with nitrogen content of 18%, a standard P205 content of 46%, and a maximum moisture content of 2.5%

Quantity: 45,000 mt

Basis and Location: FOB Fangcheng, China

Timing: Loading 25-50 days forward

Frequency: Weekly

Unit of assessment: $/mt

Timestamp: 16:30 Penang close, published according to the Penang publishing calendar

FOB China, Cash

This weekly range assessment – FOB China reflects the lowest and highest of FOB China South and FOB China River DAP assessments published over the course of the preceding week (Friday – Thursday).

CFR India, Bulk

Quality: DAP with nitrogen content of 18%, a standard P205 content of 46%, and a maximum moisture content of 2.5%; Duty unpaid spot product that incurs the standard rate of Indian import duty

Quantity: 25,000 mt - 50,000 mt

Basis and location: CFR Mundra, India.

Timing: Shipment 5 - 30 days forward

Frequency: Weekly

Unit of assessment: $/mt

EMEA

FOB Morocco 68-72 BPL

Quality: Price assessments reflect Moroccan phosphate rock 68-72 BPL/31-33% P2O5

Quantity: Minimum quantity 6,000 mt

Basis and location: FOB Casablanca in bulk and FOB Jorf Lasfar in bulk. Based on contract and/or spot FOB or netbacks of CFR priced sales made from Morocco. The price can include quarterly contracts as well as spot deals. The previous quarter's price stands until the prevailing quarter's price is finalized provided no other spot or contract business is concluded in the meantime. The quarterly price agreed for the period remains as the high or the low end of the range for that shipment period.

Timing: Primarily quarterly contract shipments – up to 90 days forward.

Potash

MOP – Muriate of Potash which refers to potassium chloride (KCl), typically containing 60-61% potassium oxide (K2O). If the K2O content is higher, an adjustment in price may be made accordingly.

SOP – Sulfate of Potash which refers to potassium sulfate (K2SO4), typically containing 50-51% potassium oxide (K2O)

Standard Potash

Asia

CFR Malaysia, Spot

Sulfur

Solid Sulfur

Asia

CFR Indonesia (Granular)

Quality: Granular sulfur in bulk

Quantity: minimum 35,000-50,000 mt

Basis and location: CFR Gresik, Indonesia

Timing: Loading up to three months forward

Frequency: Weekly

Unit of assessment: $/mt

Timestamp: 16:30 Penang close, published according to the Penang publishing calendar

CFR China River, Spot Granular

Quality: Granular product in bulk

Quantity: 45,000 mt

Basis and location: CFR Zhenjiang, China River.

Timing: Delivery 18-50 days forward

Frequency: Weekly

Unit of assessment: $/mt

Timestamp: 16:30 Penang close, published according to the Penang publishing calendar

CFR South China, Spot (Granular)

Quality: Granular product in bulk

Quantity: 45,000 mt

Basis and location: CFR Fangcheng,South China.

Timing: Delivery 18-50 days forward

Frequency: Weekly

Unit of assessment: $/mt

Timestamp: 16:30 Penang close, published according to the Penang publishing calendar

CFR China, Spot,Granular

This weekly range assessment – CFR China (Granular) reflects the lowest and highest of Granular CFR China River and Granular CFR South China assessments published over the course of the preceding week (Friday – Thursday).

CFR China (Molten, Granular)

This weekly range assessment – CFR China (Molten, Granular) reflects the lowest and highest of Granular CFR China River; Granular CFR South China; Molten Sulfur CFR China (Lianyungang) assessments published over the course of the preceding week (Friday – Thursday)

CFR India West Coast (Granular)

Quality: Granular sulfur in bulk

Quantity: 30,000 mt

Basis and location: CFR Kandla, India

Timing: Delivery 10-30 days forward

Frequency: Weekly

Unit of assessment: $/mt

Timestamp: 16:30 Penang close, published according to the Penang publishing calendar

CFR India East Coast (Granular)

Quality: Granular sulfur in bulk

Quantity: 30,000 mt

Basis and location: CFR Paradip, India

Timing: Delivery 10-30 days forward

Frequency: Weekly

Unit of assessment: $/mt

Timestamp: 16:30 Penang close, published according to the Penang publishing calendar

CFR India (Granular)

This weekly range assessment – CFR India (Granular) reflects the lowest and highest of Granular CFR West Coast and Granular CFR East Coast assessments published over the course of the preceding week (Friday – Thursday).

EMEA

FOB Middle East, Contract & Spot (Granular)

The weekly range assessment – FOB Middle east, Contract & Spot reflects the lowest & highest of the Middle east FOB Contract and Middle east FOB Spot assessments.

FOB Middle East, Contract (Granular)

Quality: Granular sulfur in bulk

Quantity: minimum 6,000 mt

Basis and location: Quarterly contract cargoes; FOB basis. Countries covered typically Kuwait and UAE but can include other ME origins if applicable. Loading ports: includes Mina Al Ahmadi and Ruwais.

Price basis: quarterly prices agreed both on an FOB and CFR basis with the latter netted back using prevailing freight rates. Typically based on contracts to North Africa and Brazil plus quarterly trader contracts. Those suppliers that do not agree quarterly contracts are not included. Once sufficient contracts are finalized, the price range is published for the new quarter. The contract range can be amended within the first month after publication if new information has come to light that changes the published range. Any such change will be made clear in the price table. Thereafter it will be fixed unless the price has been renegotiated during the quarter in question as part of a mutual agreement between buyers and sellers.

Timing: Product to be shipped up to 90 days forward

Frequency: Weekly

Unit of assessment: $/mt

Timestamp: 16:30 London close, published according to the London publishing calendar

FOB Middle East, Spot (Granular)

Quality: Granular sulfur in bulk

Quantity: minimum 6,000 mt

Basis and location: FOB. Countries covered: Iran, Saudi Arabia, Qatar, UAE, Kuwait. Loading ports: all sulfur-exporting ports/ terminals in the countries listed above including Jubail, Yanbu, Ras Laffan, Mesaieed, Ruwais, Mina Al Ahmadi, Bandar Abbas, Assaluyeh.

Price basis: the price range is typically derived from sales tenders in Iran, Qatar and/or spot sales from other ports in the region, competitive offers/ bids and derived FOB prices from CFR sales where appropriate. In the absence of representative FOB Middle East price information, Platts may also refer to CFR prices in relevant destinations and will use prevailing spot freight rates and origin adjustments to normalize to FOB Middle East.

Timing: Product to be shipped up to 30 days forward

Frequency: Weekly

Unit of assessment: $/mt

Timestamp: 16:30 London close, published according to the London publishing calendar

EMEA

CPT NW Europe

Quality: Liquid Sulfur

Quantity: N/A

Basis and location: Contract, quarterly. Load port: Contract, quarterly. Countries covered: NW Europe – e.g. Belgium, Netherlands, Germany and Northern France. Discharge ports: Inland Rail and Truck deliveries across NW Europe. Price basis: The previous contract price stands until the new price range is confirmed by the relevant market participants. If negotiations have yet to fully conclude six weeks into the new quarter, Platts will assess the contract price based on the information received, prioritizing information with a higher degree of confirmation from relevant market sources.

Timing: Quarterly

Frequency: Weekly

Unit of assessment: $/mt

Timestamp: 16:30 London close, published according to the London publishing calendar

Delivered Benelux (refinery)

Quality: Liquid Sulfur

Quantity: minimum size: barges - entire trains designated for carrying liquid sulfur only

Basis and location: Contract, quarterly. Countries covered: typically, Belgium, Netherlands, France. Discharge ports: Delivered from Benelux refineries. Price basis: derived from discussions with market participants on both buy and sell side; for example, regional distributors, sulfuric acid producers and oil refiners. The price includes barges and larger rail car consignments, large quantities and also plants that are closer to refineries and connected directly with the pipeline. Typically, the price is lower than NW Europe because of large volume purchases and being closer to refineries. An estimated 80% of traded molten product is negotiated quarterly between large trading partners in the region within this price range.

Previous contract price stands until the new price range is confirmed by the relevant market participants. If negotiations have yet to fully conclude six weeks into the new quarter, Platts will assess the contract price based on the information received, prioritizing information with a higher degree of confirmation from relevant market sources.

Timing: Quarterly

Frequency: Weekly

Unit of assessment: $/mt

Timestamp: 16:30 London close, published according to the London publishing calendar

Fertilizer Freight

Platts assesses weekly spot market freight rates for the chartering of dry bulk/liquid vessels for the fertilizer sector and produces daily model-based ammonia freight assessments detailed specifications of which can be found in our Global Freight Specifications Guide.

© 2026 by S&P Global Inc. All rights reserved.

Revision history

January 2026: The guide was updated to include the specifications of a new calculated Carbon Border Adjustment Mechanism (CBAM) cost value for ammonia, updates to the specifications of several Americas potash assessments, and an update to the specifications of the FOB Caribbean granular urea assessment.

November 2025: Platts added updated specifications for two FOB Middle East-Americas netback granular urea assessments and the FOB Middle East (Full Range) granular urea assessment. Specifications for two new Urea Ammonium Nitrate (UAN) CFR US East Coast assessments were added and specifications changed for UAN CFR East Coast. Additionally, the assessment type for Middle Eastern monthly sulfur posted prices was changed from low-high to low-high-close. The guide also reflects amended incoterms for four US domestic urea price assessments.

October 2025: This guide was updated to include the specifications of three Americas Urea Ammonium Nitrate (UAN) price assessments; the updates include the introduction of a new "close" value, and refining and amending specifications such as quality, quantity, basis and location. The update also reflects clarification of the incoterm for its Urea Ammonium Nitrate FCA Eastern Oklahoma/Coffeyville assessment. The guide also reflects two new weekly price assessments for ammonium sulfate (AS) delivered to Brazil, on a CFR Brazil North-Northeast and CFR Brazil South-Southeast basis. Additionally, the weekly range for Ammonium Sulfate (21% N) Caprolactam Compacted/Granular CFR Brazil assessment now reflects the lowest and highest values published from the above-mentioned AS CFR Brazil SSE and NNE assessments. Platts has also amended the specifications of the weekly CFR Brazil assessment to align with those of the above-mentioned AS CFR Brazil SSE and NNE assessments. The guide also reflects the discontinuation of its weekly CFR US Gulf/Tampa and CFR US Gulf (Mississippi, Louisiana, Texas) ammonia assessments and adjusted the specifications of its daily CFR US Gulf/Tampa ammonia assessment.

August 2025: This guide was updated to reflect the launch of two new regional Granular Urea CFR Brazil assessments, along with changes to the methodology of the Urea CFR Brazil range assessment. The guide also reflects the refinement of the Granular Urea FOB Caribbean assessment. A daily granular urea FOB NOLA assessment was launched, together with the formalization of its weekly range and the increase in frequency of the Granular Urea FOB NOLA US Domestic Ston assessment. In addition, updates include the launch of two regional MAP CFR Brazil NNE & SSE assessments and changes to the methodology of the MAP CFR Brazil range assessment, launch of DAP & MAP FOB Tampa, Florida, the reform of eight Americas DAP assessments, and the reform of six Americas MAP assessments together with one TSP assessment. The update also reflects the clarification made regarding methodology for US netback assessments of ammonia and urea in light of new tariffs. The ammonia forward curves, which were previously found in the Global Hydrogen and Ammonia Specifications Guide, were added to the Fertecon Specifications Guide.

July 2025: Platts completed an annual review of this guide, reviewing all content, correcting typos and making edits to language throughout for consistency and clarity. Discrepancies between text and tables were corrected. Specifications for several assessments were revised along with multiple discontinuations and new launches across all regions and commodities.

March 2025: This guide was updated to reflect the launch of new DAP and TMAP assessments effective 23 Jan and 20 Feb respectively. The guide also reflects the discontinuation of NPK 16-16-16 FOB Eastern Europe assessment effective 03 Feb, 2025. The guide has also been updated to reflect the changes in methodology of several FOB China sulfur assessments effective 09 Jan, 2025. The guide has also been revised to reflect the change in timestamp for FOB Australia DAP effective 27 Feb, 2025 and the launch of CFR Singapore and CFR SEA ammonia assessments along with change in CFR Far East ammonia assessments effective 24 March, 2025. The carbon intensity specification of the Japan Korea Ammonia Price (JKAP) was also adjusted.

February 2025: The 'Definitions of the trading locations for which Platts publishes indexes or assessments' was extended to include sections previously included in the Global Fertilizer Methodology Guide. A number of new assessments specifications were added, including daily FOB Algeria granular urea, daily FOB Egypt granular urea, daily FCA France granular urea, FOB Baltic automotive grade urea (AGU), CFR China River sulfur, and CFR South China sulfur. Meanwhile, crushed sulfur was removed from CFR China Spot sulfur (molten, crushed, granular) specifications and the assessment renamed China Spot sulfur (molten, granular). CFR Lianyungang (molten) specifications were adjusted. Similarly, the specifications of existing weekly FOB Algeria granular urea, weekly FOB Egypt granular urea, weekly FCA France granular urea, and all CFR NW Europe ammonia assessments were adjusted. The names of all sulfur, sulfuric acid, ammonium sulfate, ammonium thiosulfate, and potassium sulfate assessments were also adjusted to use the "f" spelling rather than the "ph" spelling.

November 2024: The frequency specification of all potash assessments was changed to weekly. The timestamp specification of all Americas assessments and some Asia ammonia assessments was also adjusted. Under ammonia, FOB US Gulf and US Gulf Ammonia Price (UGAP) assessment specifications were added. Under sulfuric acid, CFR Indonesia and CFR Vietnam assessment specifications were added. Under nitrates, FOB Baltic/Black Sea ammonium nitrate assessment specifications, while specifications for the discontinued FOB Black Sea ammonium sulfate assessment were removed. Also, links were added to the Specifications Guide Global Freight (which includes fertilizer, sulfur, sulfuric acid and ammonia

© 2026 by S&P Global Inc. All rights reserved.

freight assessments) and the Methodology and Specifications Global Guide Hydrogen and Ammonia (which includes model-based low-carbon ammonia and ammonia forward curve assessments).

October 2024: Amendments made to cargo sizes and basis locations for CFR Mediterranean and FOB Mediterranean crushed lump and granular sulfur assessments. For ammonia, FOB North Africa and China Domestic EXW Jiangsu assessments have been added and timestamp changed on daily CFR Far East ammonia assessment has been reflected. Meanwhile, change in quantity specifications for FCA France granular urea assessment have been reflected.
